

Sustainability-related disclosures for Private Suite - Schroders Global Climate Change

This document provides you with a summary of sustainability-related information available on our website about this financial product. It is prepared in relation to Article 10 of the Sustainable Finance Disclosure Regulation (EU) 2019/2088. The information disclosed is required by law to help you understand the sustainability characteristics and/or objectives and risks of this financial product.

Date of Publication: 13 December 2023

Legal entity identifier 549300FNA6X08O2IXD20

<p>Summary</p>	<p>This Sub-fund promotes environmental or social characteristics. The Investment Manager identifies the sustainable investments according to SFDR on the basis of UN SDGs as described in more detail below in the section "Methodologies". No reference benchmark has been designated for the purpose of attaining the environmental or social characteristics promoted by the Sub-fund. The indicators used to measure the attainment of each of the environmental or social characteristic promoted by the Sub-fund are:</p> <ul style="list-style-type: none"> • the absence of investments in securities that are on the exclusion list as result of the application of the exclusion policy. The Investment Manager excludes investment in sectors which deems to be harmful from an SRI/ESG perspective or which do not follow good governance practices. The Sub-fund complies with an exclusions policy which refers to: i) the production, maintenance, sales and storage of weapons of mass destruction (WMD); and ii) the extractive activities, production and distribution of electricity connected with thermal coal, the energy source among fuels which represents the highest contributor in terms of carbon dioxide emissions; therefore, issuers deriving at least 25% of their revenues from these activities are excluded. The exclusion is extended to those issuers in breach of the Principles of the UN Global Compact which include principles relating to human rights, labour conditions, environmental issues and anti-corruption practices; • the ESG rating of the portfolio. <p>To undertake the ESG rating analysis, sustainable characteristics of the underlying investments are defined by reference to a combination of data generated internally by the Investment Manager's proprietary models and data provided by external ESG research providers. The assessment of the good governance practices is a central pillar of the investment process adopted by the Investment Manager and it consists on the assurance that the governance of each investee company is based on rules of conduct aligned to international best practices and inspired by the consideration of all stakeholder's interests also by means of a remuneration policy. The good governance assessment takes into account sound management structures, employee relations, remuneration of staff and tax compliance.</p> <p>In order to guarantee compliance with the strategies adopted to promote environmental and social characteristics, the Investment Manager relies on external info-providers. The Investment Manager's approach includes the adoption of strategies in line with the Principles for Responsible Investing. These strategies can be integrated into different steps of the investment process and they are based on exclusion criteria (for Issuers operating in non-socially responsible sectors or exposed to ESG risk) and in the integration of ESG factors into the analysis, selection and composition of managed portfolios with flexible approaches with regards to asset class typology and product investment strategy. In accordance with the binding element of the investment strategy adopted for promoting the environmental and social characteristics, the minimum proportion of the investments that meet the ESG criteria (in terms of ESG rating coverage) should be at least 50% of the portfolio (box #1 Aligned with E/S characteristics).</p> <p>The remaining proportion (50% corresponding to the box #2 Other) of the investments (not included in the investments for promoting environmental or social characteristics) should be limited to:</p> <ul style="list-style-type: none"> • cash and cash equivalent instruments which may be held as ancillary liquidity or for risk balancing purposes; • derivatives which may be held for risk balancing purposes and efficient portfolio management but not for promoting environmental and social characteristic; • securities for which relevant data is not available.
<p>No sustainable investment objective</p>	<p>This Sub-fund promotes environmental or social characteristics, but does not have as its objective sustainable investments.</p>
<p>Environmental or social characteristics of the financial product</p>	<p>The main environmental and social characteristics promoted by the Sub-fund through the Investment Manager's ESG methodology are the following:</p> <ul style="list-style-type: none"> • Environmental: climate change prevention (in terms for example of reduction of carbon emission, carbon footprint, climate change vulnerability), pollution & waste prevention (with reference to toxic emissions & waste, packaging material & waste, electronic waste), environmental opportunities (in clean tech, in renewable energy); • Social: human capital (labor management, health & safety, human capital development, supply chain labor standards), product liability (product safety & quality, chemical safety, consumer financial protection, privacy & data security, responsible investment, health & demographic risk), social opportunities (access to communications, access to finance, access to health care, opportunities in nutrition & health), stakeholder opposition (controversial sourcing, community relations). <p>No reference benchmark has been designated for the purpose of attaining the environmental or social characteristics promoted by the Sub-fund.</p>
<p>Investment strategy</p>	<p>The Investment Manager's approach includes the adoption of strategies in line with the Principles for Responsible Investing. These strategies can be integrated into different steps of the investment process and they are based on exclusion criteria (for Issuers operating in non-socially responsible sectors or exposed to ESG risk) and in the integration of ESG factors into the analysis, selection and composition of managed portfolios with flexible approaches with regards to asset class typology and product investment strategy. In order to assess good governance practices, the Investment Manager utilises a Schroders' proprietary tool to help it develop a complete understanding of a company through a stakeholder lens. Wherever the Investment Manager deems possible, in the context of an incomplete and developing data landscape, the Investment Manager sets levels or principles for what would be deemed to cause significant harm by applying appropriate values in relation to the principal adverse impacts applicable to sustainable products</p>

	<p>The Fund's investment and asset selection process has been reviewed and approved by the investment manager's Product Development Committee that includes representatives from the Legal, Compliance, Product and Sustainable Investment functions. Ongoing compliance with the agreed sustainability characteristics is monitored by the Portfolio Compliance Team. There are no external controls on that due diligence.</p> <p>The Investment Manager's investment process is driven by proprietary bottom-up fundamental stock selection. Expertise from both the Investment team and the Sustainability team provide a diversity of idea generation and high degree of scrutiny of ideas around the expected trajectory of long term growth, ESG and sustainability characteristics.</p>
Proportion of investments	<p>In accordance with the binding element of the investment strategy adopted for promoting the environmental and social characteristics, the minimum proportion of the investments that meet the ESG criteria (in terms of ESG rating coverage) should be at least 50% of the portfolio (box #1 Aligned with E/S characteristics).</p> <p>The remaining proportion (50% corresponding to the box #2 Other) of the investments (not included in the investments for promoting environmental or social characteristics) should be limited to:</p> <ul style="list-style-type: none"> • cash and cash equivalent instruments which may be held as ancillary liquidity or for risk balancing purposes; • derivatives which may be held for risk balancing purposes and efficient portfolio management but not for promoting environmental and social characteristic; • securities for which relevant data is not available.
Monitoring of environmental or social characteristics	<p>The sustainability score of the Fund is measured by SustainEx™, Schroders' proprietary tool that provides an estimate of the societal or environmental impact that an issuer may create.</p> <p>The exclusion of certain activities, industries or groups of issuers listed below, as well as the investment limits applicable to the Fund, will be measured within the Investment Manager's portfolio compliance framework. Exclusions and limits are coded into this framework to seek to ensure that pre-trade compliance correctly flags the securities that should not enter the portfolio. Securities excluded based on revenue thresholds are evaluated quarterly by the Sustainable Investment team using MSCI's revenue data.</p> <p>The coding and monitoring of investment risk restrictions for individual fund and client mandates is the responsibility of the Investment Manager's Portfolio Compliance team within the independent Investment Risk function.</p> <p>The data in the portfolio compliance framework forms the basis for monitoring of risk limits and indicators, and the latest information on portfolio structure (such as asset allocation, sector and country positions) and risk metrics is easily available to our investment risk, portfolio compliance and investment teams.</p> <p>Exclusion Criteria</p> <p>Environmental exclusions Excluded Activity Criteria</p> <ul style="list-style-type: none"> - Fossil Fuel Extraction and Production Maximum Percentage of Revenue*: 5% - Thermal Coal Power Generation Maximum Percentage of Revenue: 30% - Carbon Underground 200: Full list <p>Social exclusions Excluded Activity Criteria</p> <ul style="list-style-type: none"> - Tobacco Production Maximum Percentage of Revenue: 10% - Tobacco Value Chain Maximum Percentage of Revenue: 25% - Weapons Maximum Percentage of Revenue: 10% - Civilian Firearms Maximum Percentage of Revenue: 10% - Nuclear Weapons Maximum Percentage of Revenue: 0% - Biological/Chemical Weapons Maximum Percentage of Revenue: 0% - Any Tie to Cluster Munitions: Any tie - Any Tie to Depleted Uranium Manufacturing: Any tie - Any Tie to Landmine Manufacturing: Any tie - Any Tie to White Phosphorous Incendiary Weapons: Any tie <p>Bespoke Schroders exclusions Excluded Activity Criteria</p> <ul style="list-style-type: none"> - Schroders Controversial Weapons Curated List*: All <p>*Fossil fuels refer to conventional oil & gas, unconventional oil & gas and thermal coal. **Schroders controversial weapons screening covers cluster munitions, anti-personnel mines, and chemical and biological weapons. Full details of the criteria and company names are available via the following link: https://www.schroders.com/en/sustainability/active-ownership/group-exclusions</p>
Methodologies	<p>The Fund promotes the following characteristic: it maintains a higher overall sustainability score than the MSCI All Country World (Net TR) Index, based on the Investment Manager's rating system. As stated above, the sustainability score is measured by SustainEx™, Schroders' proprietary tool that provides an estimate of the potential societal or environmental impact that an issuer may create. It does this by using certain metrics with respect to that issuer, and quantifying the positive (for example by paying 'fair wages') and negative (for example the carbon an issuer emits) impacts of each of those metrics to produce an aggregate measure expressed as a notional percentage of sales of the relevant underlying issuer. The overall sustainability score aggregates the effect of sustainability indicators including but not limited to greenhouse gas emissions, water usage, and salaries compared to the living wage. An issuer may be a company or a sovereign. The Investment</p>

Manager monitors compliance with this characteristic by reference to the weighted average sustainability score of the Fund in SustainEx™ over the previous six month period.

As part of the Fund's investment processes, the SustainEx™ score, and the drivers of that score, are reviewed at the overall fund level. Schroders proprietary tools, including SustainEx™, may not cover all of the Fund's holdings from time to time, in which case the Investment Manager may use alternative methods to assess relevant holdings in the Fund. In addition, certain types of assets (such as cash and certain equivalent securities such as gilts) are treated as neutral and are therefore not considered by our proprietary tools.

The Fund also invests at least 50% of its assets in sustainable investments, which are investments that the Investment Manager expects to contribute towards the advancement of one or more environmental and/or social objective(s). The Investment Manager monitors compliance with this characteristic by reference to the sustainability score of each asset in Schroders' proprietary tool. Compliance with this is monitored daily via our automated compliance controls.

As part of its broader assessment, the Investment Manager also considers the following:

CONTEXT

Context is a proprietary ESG research tool which provides a systematic framework for analysing a company's relationship with its stakeholders and the sustainability of its business model. Comprising over 260 metrics across over 13,000 companies, it is designed to support the Investment Manager's understanding of the sustainability of companies' business models and profitability, and provides structured, logical and wide-ranging data.

The tool enables analysts to select the most material ESG factors for each sector, weight their importance and apply relevant metrics. Analysts are then able to compare companies based on the metrics selected, their own company assessment scores or adjusted rankings (size, sector or region), with the flexibility to make company specific adjustments to reflect their detailed knowledge. The tool is fully integrated within Schroders' global research platform, which is readily accessible across investment desks and geographies.

EXTERNAL RESEARCH

The Investment Manager uses information from several external ESG research firms, but only ever as one input into the Investment Manager's own company assessments to be questioned, examined and built on. External data providers are used to challenge or endorse the proprietary view of the Investment Manager.

The Investment Manager's Sustainable Investment team has extensive networks within its respective field. Information is drawn from publicly available corporate information and company meetings, from broker reports, industry bodies, and research organisations, think tanks, legislators, consultants, Non-Governmental Organizations and academics; wherever it is felt the information would add value to the Investment Manager's analysis.

Through this process, the Investment Manager aims to evaluate the relevance and materiality of a range of ESG factors on future earnings growth and as potential risk factors for a company.

Data sources and processing

In order to assess and understand the potential impact of sustainability risks and opportunities, Schroders has developed a range of proprietary tools. These tools rely on data that is available at the level of the underlying investment holdings.

The Investment Manager draws information on investee companies from publicly available corporate information and company meetings, from broker reports, industry bodies, and research organisations, think tanks, legislators, consultants, Non-Governmental Organisations and academics.

Third party research may be used, however our internal analysts form a proprietary view on each of the companies we analyse. Financial analysts may also use third-party research to support their assessment of ESG issues when analysing companies, in addition to consulting with our in-house ESG specialists. Through this process, we aim to evaluate the relevance and materiality of a range of ESG factors on the sustainability of future earnings growth and as potential risk factors for a company.

The Investment Manager subscribes to external ESG research providers including; MSCI ESG research, Bloomberg, Refinitiv, Sustainalytics and Morningstar, which is subject to periodic review and change.

Whilst the third parties that deliver the vast majority of the data used have been chosen carefully, data errors may occur. To address this, a dedicated ESG Data Governance team pro-actively monitors for errors and resolves data queries. This involves close collaboration with the third-party data providers, and managing and tracking data corrections.

Where data is not available, Schroders will engage with companies to encourage them to disclose the missing data points. This additional information will be used alongside data from conventional and unconventional data sources that feed into our proprietary tools.

Some of our proprietary tools infer missing values where applicable. Our models typically employ a range of techniques to estimate missing values where appropriate and reasonably robust. For example, in one tool, where reported values are missing for companies, we fill using metric-specific rules such as filling with the industry peer group 60th percentile where higher values are considered negative and the peer group 40th percentile where higher values are considered beneficial (which is a conservative approach).

Where data for a metric is not sufficiently available to form robust conclusions, we do not include that metric in our tools.

Limitations to methodologies and data	<p>The characteristic promoted by the Fund is to maintain a higher overall sustainability score than the benchmark, based on the Investment Manager's rating system.</p> <p>Limitations to the Investment Manager's methodology and data may arise from data availability, and specifically the lack of company reported data.</p> <p>The section "Data sources and processing" outlines the approach in ensuring the above mentioned limitations do not affect how the environmental or social characteristics promoted by the financial product are met.</p> <p>The Fund also commits to invest at least 50% of its assets in sustainable investments, based on the Investment Manager's rating system.</p>
Due diligence	<p>The Fund's investment and asset selection process has been reviewed and approved by the Investment Manager's Product Development Committee that includes representatives from the Legal, Compliance, Product and Sustainable Investment functions. Ongoing compliance with the agreed sustainability characteristics is monitored by the Portfolio Compliance Team. There are no external controls on that due diligence.</p>
Engagement policies	<p>With the aim of preventing, containing and managing the main adverse impacts of investment decisions on sustainability factors, the Management Company conducts engagement actions - both individual and collective with other investors - and exercises its voting rights on the issuers in its portfolio, in order to create awareness and orient the issuers' behaviors towards specific sustainability issues, according to the times and methods formalized in its "Engagement Policy" and in the "Strategy for the exercise of the attendance and voting rights attached to the financial instruments held by the UCITS under management".</p> <p>In this case, the Company informs the issuer about the identified criticalities, directing its decisions towards their immediate reduction. If these actions are not addressed in an effective and timely manner by the issuer, the Company evaluates to initiate specific reduction or disposal initiatives, even of a progressive nature, of the investment in these issuers.</p> <p>The initiatives carried out and the decisions taken regarding these activities are reported and formalized in order to guarantee a thorough traceability of the decision-making processes and outcomes</p>
Designated reference benchmark	<p>No reference benchmark has been designated for the purpose of attaining the environmental or social characteristics promoted by the Sub-fund .</p>
